

Overview

Slip and fall accidents are a major concern in the workplace and at home. They often cause serious injury, the loss of countless man hours of production time, and result in high workman's compensation premiums and litigation. RezCast® products provide a long term solution to potentially dangerous walkways and stairways.

RezCast® is a complete line of slip resistant stair tread products, step covers, load bearing treads and plates, and floor mats in a variety of colors, slip resistant profiles, and shapes. Our product lines are fiberglass reinforced composites with a durable aggregate filled surface profile. RezCast® products are ideal for industrial, commercial, or residential applications, where an attractive, long lasting anti-slip solution is desired.

RezCast® product construction offers advantages over competitor's products made from metal, vinyl or rubber. Unlike metal our products can be easily cut and machined to fit using common tools. While rubber, vinyl and metal are highly susceptible to oxidation, sunlight and ozone damage, RezCast® safety flooring is extremely durable, highly resistant to wear, as well as corrosion and chemical exposure.

RezCast® Safety Flooring products offer the optimum in anti slip protection at value prices. Our products outperform and outlast other products on the market today. We back this with a 10 year limited warranty.

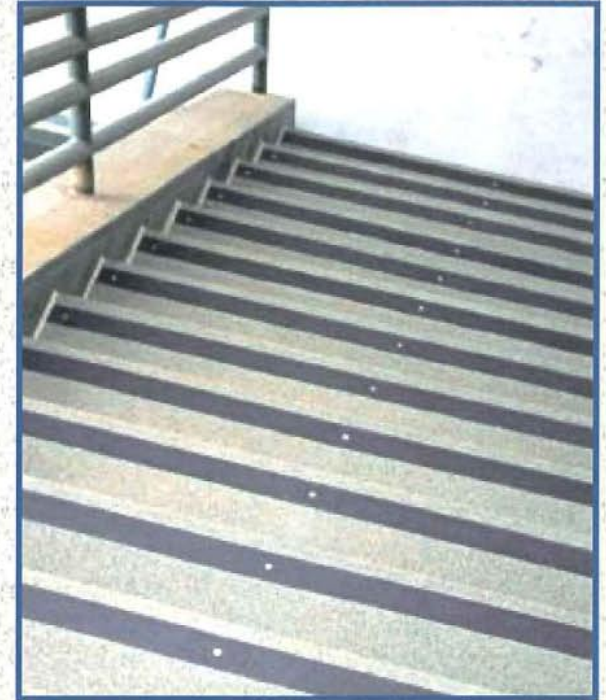

In addition to offering superior slip resistance, and durability, RezCast® products are visually attractive. Our products are available in a wide range of colors textures and physical dimensions. Our ADA line is fully compliant to the current ADA/CALDAG specifications for the visually impaired. For those special applications, RezCast® products can be produced in custom colors and configurations to meet virtually any requirement.

RezCast®

Safety Flooring

General Description

Product classification: NAICS 327993 (North American industrial product classification system). RezCast® products are pre-cast reinforced polymer composites designed to restore slip-resistant safety to pedestrian walking surfaces in industrial, commercial and residential locations. RezCast products are resistant to degradation in corrosive environments, and UV stable.

Anti-Slip Properties

Slip-resistance of a walking surface is a paramount importance to insure safe access and egress. One of the unique safety characteristics of RezCast® step covers and structural treads is the wrap around safety "toe" that provides a continuous non-slip coefficient of friction (COF) while ascending and descending stairways. Metal, rubber, and vinyl product coverings don't afford this safety feature. RezCast® products have been tested using (ASTM C-1028) test method with the following results: dry test rating of 1.07; wet test .94 rating. A COF of .80 is the general accepted standard.

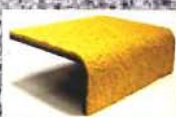

Product Installation

RezCast® Safety Flooring is installed using high quality adhesives and or mechanical fasteners. As the manufacturer, RezTech Industrial Services takes pride in product construction. We also expect a safe secure product installation, and offer necessary customer support to insure a secure installation.

Durability

RezCast® step cover products outperform and outlast other products on the market today and we back this assurance with a 10 year limited performance warranty.

Cover Products

ISC-Industrial Step Cover		Features
	Heavy duty .250 mil thickness with 1.5" nose and optional contrasting safety colored "toe".	Thicker construction for heavy traffic demands. Highly resistant to chemical exposure. Industrial & commercial applications.
SSC-Commercial Step Cover		Features
	.187 mil thickness with 1.5" nose and optional contrasting colored safety "toe".	Medium to heavy traffic; industrial, commercial or residential uses. 10 yr limited warranty. Industrial, Commercial, Residential applications.
ADA-Step Cover		Features
	.187 mil nominal thickness with 1.5" nose and safety stripe in a contrasting color.	Complies with ADA/CALDAG slip resistance and visibility standards (1133B.4.4, 1133B.4.5) for the visually impaired. 10 yr limited warranty.
VL-Value Line Step Cover		Features
	.125 mil nominal thickness with 1.5" "toe" (nose).	Value priced. Easily cut to fit using common tools. Suitable for many residential applications. 5 year limited warranty. Standard colors.
RCFC-Floor Covering (sheeting)		Features
	Semi rigid fiber re-enforced composite non-structural flat panel flooring of .125 or .187 mil nominal thickness.	Durable sheeting for decking & walkways. Available in 4' x 8' sheets or cut to size. Applications include marine, food, petroleum & handicap ramp applications.
RC-Reducer		Features
	Transition step cover with feathered trailing edge. Available in 9" and 5" runs and lengths from 18" to 10'.	Designed to finish stairway applications on landings. Also used as a cap or step edging on stairways. Durable slip resistant finish.
LC-Landing Connector		Features
	3" x 2" nose cap: Slip resistant connector for RCFC floor covering. Also an adaptor for existing floor finished products. Available in lengths to 10'.	Slip resistant nosing "toe" to connect finish flooring on landings, decking, & steps. Substitute for metal, tile, carpet, or vinyl step nosings. Transit vehicle stair wells. Installs with SS screws or adhesive. Available in standard & premium colors.

Sizes and Colors: RezCast® Safety Flooring is available in standard sizes: Step Covers: lengths of 2', 2.5', 3', 3.5', & 4'. Standards runs (front to back of existing stair tread) are 9", 10", 11" & 12". RCFC Floor Covering is available in 4' x 8' sheets. **All RezCast® products can be sized to customer requirements.** NON-SLIP PROFILES: Fine medium Coarse, extra coarse. STANDARD COLORS: gray, black, brite white, safety, yellow, dark brown, and dessert, terra cotta, marine, aqua blue, tan, tile red and green. See our premium colors on the web at www.rezcast.com
